WHEREAS, education is confronted by unparalleled problems, such as shortages in teacher supply, classrooms, and finance, which can be solved only by public understanding and public action, and

This leaves [illegible] of [illegible] almost 50 per cent whose condition is undetected according to Dr. William F. Hill, Jr., director of the Highlands County Health Department.

Among the general population diabetes is more prevalent in relatives of diabetics. It is also more prevalent after the age of 30 and in overweight individuals. The Highlands County Health Department has been conducting an annual diabetes survey among the relatives of diabetics who receive their insulin through the Health Department. There were 43 tests done this year and two were referred to their private physician for further follow-up.

How can diabetes be found? The simplest way is by testing urine two hours after a meal rich in starchy foods. When ever someone has a positive urine sugar a blood sugar test should be made by a physician and the Highlands County Health Director. The best method for a blood sugar screening is to have a blood specimen drawn two hours after a heavy carbohydrate meal explained Dr. Hill.

Diabetes is the seventh leading cause of death in the United States. Permanent damage may occur to various organs of the body if diabetes is not detected and treated early. November is the beginning of Diabetes Detection Week throughout the [illegible] of Commerce in Sebring and Avon Park and the Kiwanis Club of Lake Placid will [illegible] that the Diabetes detection program in Highlands County [illegible] Dr. Hill urges all to take advantage of the free tests offered during this week.
