

No Secret Poison Gases to Fear

Expert Says Development At Peak; Chemists Busy On Other Lines.

COLUMBUS, OHIO.—Those who fear the present war in Europe will result in the development of new and more deadly gases may relieve their minds. Dr. James B. Withrow, an internationally known authority on chemical engineering, declares such fears are groundless.

Dr. Withrow, chairman of the department of chemical engineering at Ohio State university and three times director of the American Institute of Chemical Engineers, asserts that the development of explosives and gases has already progressed so far that it is impossible to go much farther.

"What research chemists the world over are trying to do is find a means of producing the known materials in larger quantities and at lower costs," Dr. Withrow explained.

Three years ago Dr. Withrow lectured at the Leuna plant in Saxony, Germany's largest munitions factory.

"My audience was not half as interested in my talk on explosion investigations as it was in the operations of its plant," he said. "Even though the factory was running at full blast, turning out materials for war."

Prepare, He Warns.

Dr. Withrow does not subscribe to the theory that the peoples of the United States should sit idly by and hope that nothing will happen to upset their calm.

"We should be prepared for anything that may develop from Europe's war," he said.

"From coast to coast the United States is dotted with potential munitions plants," he said.

"All of the chemical plants, the nitro-rayon factories, any of the dye plants which include nitrations and sulfonations. In their operations could switch from the manufacture of rayon and fertilizers to the making of materials of chemical warfare in from 30 to 60 days."

The drawback is a lack of adequate training centers to prepare men for chemical warfare work, the scientist asserted.

Dr. Withrow is enthusiastic about the recent assertion of a Washington man that liquid oxygen and a

finely divided carbon could be used as an explosive.

"A step in the right direction," he terms the suggestion.

"These dollars are now spent on TNT, the oxygen-carbon explosive would cost only cents," Withrow explained.

"It has been used for coal mining in Indiana for some time. The oxygen can be taken from the air, the carbon made from natural gas. If the material could be delivered and made to work, it would supply a cheaper method of making high explosives for use in mining as well as in warfare," he added.

If the United States should ever go abroad to fight, it is Dr. Withrow's contention that carbon could be shipped from the United States to be combined with oxygen on the continent.

He pointed out that the United States is the only country in the world possessing an abundance of developed natural gas fields.

During the World war, Dr. Withrow had charge of the small scale manufacture of cyanide compounds for the research division of the United States army.

How Many Boys and Girls Here?

At first glance it seems that boy and girl are meeting their reflections in a mirror here. Actually, four people are in the picture—two sets of twins from one family. They are Johnny and Jimmy Ehmske, 12, and their sisters, Emma and Irma, 13, of St. Louis, photographed during the Twine convention held there recently. You can guess which pair is playing the role of the.

By Thornton W. Burgess

WHAT O' MISTAH BUZZARD SAW

O' MISTAH BUZZARD, looking down from high up in the blue sky, was anxious. Yes, sir, O' MISTAH BUZZARD was very anxious.

He wanted to do something, but he didn't know what to do, and so he just did nothing but float round and round up in the blue, blue sky, watching for something to happen.

"It's jes' bound to be something," muttered O' MISTAH BUZZARD to himself. "It's jes' bound to be, and mah o' had em too thick to 'o' think of anything to do to stop 'em."

You see, it was this way. Looking down that way from high up in the blue, blue sky, O' MISTAH BUZZARD can see all that goes on in the Green Meadows and much in the Green Forest, for his eyes are very keen.

He had seen old Grancy Fox lead Bower the Hound straight over to the home of Old Man Coyote in the far corner of the Green Meadows, and he had seen Farmer Brown's Boy hurry over there with his terrible gun. Then he had seen him leave Bower on guard and hurry home, only to return with his hands full of steel traps. He had watched him take the greatest pains in setting those traps, one in each of Old Man Coyote's three doorways, and others in his private little paths.

He had watched him cover them up so that not a trace of them was to be seen, and then start off home, sure that Old Man Coyote would be caught as soon as he tried to come out.

O' MISTAH BUZZARD was sure of it too, and it was this that troubled him so. If Old Man Coyote had been anywhere above ground he could have found him and given him warning. But he wasn't above ground. He was down in his house under ground. Mistah Buzzard knew, because he saw him go there just before old Grancy Fox led Bower there. And now there was no way of getting word to him. Mistah Buzzard didn't dare drop down on the ground so as to stick his head in at one of the doorways and warn him, because he was afraid of those traps himself. So there seemed to be nothing he could do but wait and watch.

Now, it wasn't because he had any special liking for Old Man

Coyote that O' MISTAH BUZZARD was so anxious and feeling so bad. It was because traps are such dreadful things no matter who is caught in them.

"Ah wouldn't want mah worst enemy to be caught in one of those contraptions!" No, sah. Ah certainly wouldn't," said he, shaking his head as he flew round and round. He was so worried that he quite forgot to eat. Late in the afternoon, just before jolly round red Mr. Sun started down behind the Purple Hills for the night, O' MISTAH BUZZARD's sharp eyes saw a movement in one of Old Man Coyote's doorways.

"He's coming out now, and he'll be caught, sho' enough," thought he, and for a second he closed his eyes

so there seemed to be nothing he could do but wait and watch.

So as not to see. But somehow he just had to look, and when he did, what do you think he saw? He couldn't believe his own eyes. If he could have done such a thing way up there in the air he would have rubbed his eyes to make sure that he was awake and not dreaming.

What was it he saw? Well, sir, it was nothing less than Old Man Coyote his very own self just starting out across the Green Meadows and grinning as only that sly old rascal can grin. O' MISTAH BUZZARD had had his long worry for nothing. Old Man Coyote hadn't been caught and by the look of him he didn't mean to be caught in any traps that Farmer Brown's Boy had set.

"O' W. Burgess.—WHY Service.

"Muscolini" Has Something Real to Squawk About Now

WEST ACTION, MASS.—Introducing the feathered wonder of Middlesex county—"Blameless" chicks.

Robert W. Creely, 14, became interested in freak chickens, so he took two fertile hen eggs, made a small hole through the pointed end of each and then grafted both firmly together with beeswax.

The eggs hatched. Two chickens were produced, joined at their tails by a strong web of cartilage.

Creatures, ever resourceful, promptly christened "It" Muscolini and Hilder.

Hilder, the more energetic of two, spent most of the time pulling Muscolini around.

Finally, apparently by agreement, a compromise was reached.

Covers Needed

Covers are used on food in refrigerators for a definite purpose. Milk bottles are capped to keep dirt out and to keep it from going up into them from other foods. Butter, for the same reason. Fruit juices are covered to keep out air and cut down the loss of vitamin C.

Chow Sleuth . . . Dr. J. B. Howard, chief of the Microanalytical Division of the Food and Drug Administration. He sees that the food you buy is fit to eat. Here he is studying the deterioration of tomato products.

Right: Chemist Howard A. Jones, assigned to the job of solving the Japanese beetle problem. He knows the beetle like the inside of his own pocket, and soon expects to put a finish to him.

Antelope Refuge in Use

As Nursery for Fawns

LAKEVIEW, ORE.—The Hart mountain antelope refuge, east of Lakeview has been turned into a kindergarten for a group of more than 100 agile antelope fawns.

The fawns will be raised and then sent to Washington and Oregon game refuges.

They are fed canned milk from a bottle four or five times a day, until they are large enough to graze for themselves.

One inscription indicated that Eleanor Dares arrived on the Chattahoochee banks in 1581.

Another reads: "Father, I become you, have my dower go to be born here, Eleanor Dares, 1581."

Dr. Pearce, aided by other scientists, is now investigating the authenticity of the stone, along with others found in the Carolinas. He

laid and gave birth to another child, a girl.

Tree Offers Lumber

Enough for a House

MEDFORD, ORE.—A sugar pine log, scaling 8,000 board feet, enough to build a four-room house, was believed here to be the largest of its kind ever cut.

The 16-foot log had a butt measurement of 9 feet 3 inches and a top measurement of 6 feet 9 inches.

University Boys' Lasso

Rope in College Money

CHEYENNE, WYO.—After a summer of bull-dozing and bronc busting, Dean and Hyde Merritt are back at the University of Wyoming this year.

"They plan to keep on roping" cattle during the summers and lassoing" textbooks in the winter until they end with a couple of college degrees in 1943—as well as fat purses from their summer activities.

Dean, 19, and Hyde, 18, are the sons of King Merritt, rancher, who has competed in rodeo events since 1923.

Both boys are taking agriculture courses, and their college expenses will be paid from earnings at calf roping in western rodeos.

Dean struck the jackpot at the Greeley, Colo., Stead rodeo when he caught and tied a calf in 18 seconds flat to capture the \$200 prize. His chagrined father came in second best in 19 seconds.

At the Cheyenne Frontier Days bull-buck struck the Merritt family and father and sons lost to more experienced cowboys.

"But we did as well as dad," commented the college-bred cowboys. In their spare time they "ride the herd" over 150 horses and 300 cattle.

OFF THE FACE

Hide and Seek . . . but it isn't the game we played as children. The hide is couched, and these chemists are inspecting the results of experimental tanning.

Picture Parade

"Smappy Sailer" is what Eleanor Powell calls her pretty new fall bonnet. It is not blue and has a tight-fitting head band of green and ribbed falling into shoulder length streamers. The hat fits well back on the head, with slight shirring concentrated behind, where it is like the dark blue streamers.

Uncle Sam Peers Into Nature For Benefit of One and All

The government is constantly making experiments that lead towards the discovery of new uses for everything that comes from the soil, as well as towards the correction of many natural evils which seriously affect the national well being. This experimentation, in the long run, pays big dividends. Here are a few pictures showing how Uncle Sam goes about this important work.

Army Tests 'Gnat Tank'

This tough little midget armored car is undergoing rigid tests by the U. S. army. The machine will travel 60 miles an hour and carries three soldiers, a 30-caliber machine gun and 1,500 rounds of ammunition. It has four-wheel drive, seats like granite and overland tread-both wheels.

ATLANTA.—Is the fate of the "Lost Colony of Roanoke," which has baffled historians for hundreds of years, at last going to be solved? That question is uppermost in the minds of scientists as they examine a chain of crudely carved rocks which have been found from North Carolina to Georgia.

Latest of these rocks to be discovered were five significant slabs located along the banks of the Chat-

ahoochee river 10 miles northwest of Atlanta.

Their message, translated by Dr. H. J. Pearce, president of Brenau college, is this:

Eleanor Dares, mother of Virginia Dares, first white child to be born in America, came to Georgia from North Carolina, where her husband and daughter were massacred by Indians.

Deletion of newsreel attack on Kelly-Nash machine a Chicago boomerang . . . All but one of leading Tennessee newspapers supported Willie, despite TVA.
(San Francisco—WFO Service.)

WASHINGTON.—Censorship is something wonderful in Chicago. The lads know all the ropes. They not only use censorship of movies and newsreels to suppress what they do not want, but they can give that famous old Boston board of censors cards and spades, because they know how to use censorship to advertise something they want boosted.

Everybody remembers what a grand deal the old Boston censors of a few years back had in certain salacious books, for one thing, and the articles of Henry L. Mencken was then writing in his magazine, for another. Mencken would call the attention of the censors by some sort of publicity, to the audacity of something he had written in his magazine. Then the censors would have the sale of that issue in Boston. Whereupon in every hamlet in the United States they would read about this article that had caused the suppression of the magazine in the "Hub." Or, course, everybody who read this was curious to know just what it was that had been suppressed, and some of them would actually buy the magazine to find out.

CENSORS BOOSTED SALES
But the publicity did not stop there. Mencken would develop an idea some youngsters in Boston to sell the magazine on the streets in defiance of the censors' ruling. They would be arrested, and there would be another story. When you consider that the magazine Henry was then publishing was one of comparatively small circulation, it is not unlikely that several times he tripled its circulation merely by getting the censors to blacklist that particular edition.

There is no evidence that any of the publishers of salacious books used the same method, though it is certain that they profited by it whether intentionally or not.

The point of all this is that the Chicago censors a few weeks back suppressed for Chicago showing a movie in which close political friends of the organization have been interested. After a nine-day wonder, in which every newspaper in Chicago joined in the clamor, the movie was released—more publicity than any movie had received in this area since "Gone With the Wind."

More recently the Chicago police censors deleted from a newsreel attacks on the Kelly-Nash machine here by Dwight Green, Republican candidate for senator, and by Wendell Wilkie. This time they mislabeled a little. The resulting publicity caused an immediate restoration of the cut!

WILKIE SUPPORTED
It is rather interesting that the New Deal attacks on Wendell Wilkie did not go to the merits of government versus private ownership of the electric industry, but confined themselves almost exclusively to the fact that Wilkie could not fight the TVA, and in particular that they used questionable means and methods in fighting a public ownership referendum in the city of Chattanooga, Tenn.

It is also interesting that most of the people who ought to know about the details of these various fights did not seem to take these criticisms of Wilkie very seriously.

In the state of Tennessee the eight outstanding newspapers, according to a recent survey by Time magazine, are: Memphis Commercial Appeal, Memphis Press-Scimitar, Chattanooga Times, Chattanooga Free Press, Knoxville News-Sentinel, Knoxville News-Sentinel, Nashville Tennessean.

Of these eight newspapers, all but one, the Nashville Tennessean, advocated the election of Wilkie. It is interesting to note, also, that the Tennessean, the only one of the eight which is for Roosevelt, was in trouble recently, was only saved by federal hands, and is now being run by William Evans.

PROGRESSIVE DEMOCRAT
Evans is a fairly young newspaper man who came to Washington from the Southwest shortly before the New Deal came into power. He was given a job as fourth assistant postmaster general under James A. Farley. Later, when the federal government began to have something to say about the operations of the Maryland Casualty Co., he was put in virtual charge of that Baltimore concern. Still later he became head of the Tennessean.

The whole point of this is that all the outstanding newspapers in Tennessee, which by any stretch of the imagination could be said to be unimpeached by the people's government, were for Wilkie, although this is the state in which most of Wilkie's spectacular opposition to the TVA and government operation occurred.

Events in the Lives of Little MenCod Liver Oil
For Treatment
Of Skin Ulcers

By DR. JAMES W. BARTON
(Quoted by Western Newspaper Union.)

TODAY'S HEALTH COLUMN
JUST why some ulcers on the skin are so indolent or slow in healing is often hard to understand. Sometimes eating more of the foods containing lime or taking lime direct—calcium lactate, gluconate, and a specially prepared chloride—stimulate old ulcers to heal.

Vitamin D is at work in cod liver oil has been found effective in healing old or chronic bone inflammations—osteomyelitis. The bone is scraped out thoroughly and the cod liver oil fills in the hollow left by the removal of the diseased bone. It was only natural therefore that physicians, particularly skin specialists, should try using cod liver oil in the treatment of old or chronic ulcers of the skin.

Dr. James R. Driver, Dr. G. W. Brinkley and Dr. Maurice Sullivan, Cleveland, outline their method in the Urological and Cutaneous (Skin) Review.

"After experimenting with various formulas for application to indolent ulcers this one was found to be satisfactory: "Commercial cod liver oil—35 per cent.

"White wax—12 per cent."
The wax prevents the too rapid absorption of the oil in the dressing and when the dressing is removed it usually clings to the dressing, thus making it possible to prevent injuring the healing surface. A generous amount of ointment, usually one-fourth inch in thickness, is spread on gauze or muslin, then covered with oiled silk or oiled paper, and bandaged in place. Warm, moist chamber about the ulcer is thus produced.

Precaution Be Taken.
Following the first application a marked activity (ulcer is no longer indolent) is generally set up, resulting in an increased amount of pus and the liquid part of blood. The ulcer soon assumes a healthy appearance and new surface skin can be seen growing in from the margins of the ulcer. When this condition is noted, the dressing need be changed only every four or five days (instead of daily), and extreme care must be used to avoid injury, by wiping with cotton or gauze.

If any of the pus gets on surrounding skin it should be wiped off with soap and water.

Cause of Chills
And Treatment

A PHYSICIAN walking along a street one morning felt some chills run down his back and throughout his body. He turned back home, removed his clothing, and climbed into bed. The family were astonished and naturally asked the reason for going to bed.

"I don't know what is the matter. I felt a chill run down my back and throughout my body. I found my temperature is up 2 degrees. I do not feel sick but something is likely attacking me and by going to bed instead of staying on my feet, I'll give my heart more strength to fight off whatever is coming."

A physician was called in, made an examination of heart, lungs, abdomen, but as there was no pain or other symptoms he was unable to locate any trouble aside from a little redness of the throat. The physician remained in bed almost a week as the heart rate was up to 120 most of this time. No definite ailment occurred.

When something is causing trouble inside the body anywhere, the blood from the surface goes to that point to fight it. This causes the chill or chilliness of the skin and is a distinct warning that some trouble—slight or severe—is present.

A chill, for instance, is usually a sign of a cold, of influenza, pneumonia or other acute ailments. The fever that follows the chill is really the effort of the body to fight off the ailment.

Besides, a hot drink, with hot water bottles at the beginning and end of the attack, is the best treatment. Don't neglect a chill. It may mean very little, but, on the other hand, it is the first sign of a severe infection.

QUESTION BOX

Q.—What is coronary thrombosis?
A.—Coronary thrombosis is a blocking of a blood vessel by a clot, or because the walls get thickened.
Q.—What causes excessive perspiration?
A.—Excessive perspiration is a natural condition in some families. May be due to nervousness, to certain foods or drugs, ammonia. Treatment is given according to the cause. In the meantime the skin rate powder is helpful.
